## Risk-based Screening Process for Surface Water Gold King Mine Response August 11, 2015

Detected metals in surface water were compared with site-specific background concentrations. Background values were defined for the Silverton, CO area and a second background data set were defined for Durango from Bakers Bridge south to the Durango municipal water intact. Any detection that exceeded background was then compared with screening criteria for recreational water use and for Colorado criteria for agricultural use which includes both ingestion by livestock and irrigation uses. These screening values area provided in the table below.

DRAFT Water Screening Values (ug/L)				
	Surface			
	Water	Agriculture		
	Recreational	(30 day)		
Chemical	Use	(Colorado)		
Aluminum	170000			
Antimony				
Arsenic	50	100		
Barium	33,000			
Beryllium	330	100		
Cadmium	83	10		
Calcium				
Chromium	210,000	100		
Cobalt	50			
Copper	6700	200		
Iron	120,000			
Lead	200	100		
Magnesium				
Manganese	7800	200		
Mercury				
Molybdenum				
Nickel Sol				
Salts	3300	200		
Potassium				
Selenium		20		
Silver				
Sodium				
Thallium	1.7			
Vanadium	830			

Zinc	50,000	2,000
